

Frontend coding challenge

Use a framework of your choice like Vue, React, Svelte, etc. Invest 4-8h of your time.

Main goal is to have a base to discuss on. Ideally provide us a [StackBlitz](#) link to your solution.

Required features:

- display a simple workflow with nodes as shown in the screenshot
- display a search field
 - when typing, show list of possible new nodes to add (from a hard coded list or mocked HTTP response)
 - allow adding nodes to the workflow

Implement at least one optional feature:

- allow free moving of nodes
- draw the node connections
